

The Merit Sensor Blood Pressure sensor is ideal for low cost, high-volume, disposable medical applications including blood pressure monitoring. The BP Series sensor is passively compensated (which reduces temperature effects), is protected by a dielectric gel, and can easily be installed into a customer's pressure device housing.

COMPANY: Merit Sensor is a leader in piezoresistive pressure sensing and partners with clients to create high performing solutions for a variety of applications and industries. Design, engineering and manufacturing of Merit Sensor products takes place in state-of-the-art wafer fabrication facility in Utah, US.

TECHNOLOGY: Merit Sensor utilizes a piezoresistive Wheatstone bridge with a chemically etched silicon diaphragm. All products are RoHS compliant.

CAPABILITIES: Merit Sensor designs, engineers, fabricates, dices, assembles, tests and sells and services die and packaged products from a state-of-the-art facility near Salt Lake City, Utah.

FEATURES

- Pressure range of -30 to 300 mmHg
- Excellent burst pressure
- Compliant with AAMI BP22 specifications
- Dielectric gel barrier
- Fully tested from 0 to 300 mmHg in production
- Small, disposable, low-cost package
- Passively compensated, reducing temperature effects
- Solid state piezoresistive sensor
- Top side pressure entry
- Easy to install into customer's disposable blood pressure device housing
- Compatible with automated assembly equipment
- Compatible in air, gas and liquid
- Shipped as 120UP snapstrates or on tape and reel
- Automated testing and assembly
- Custom options available
- Engineering, design, and manufacturing under one roof in Utah, USA.

APPLICATIONS

- Disposable blood pressure measurement
- Kidney dialysis machines
- Infusion pumps
- Surgical procedures

NOTES:

- Assumes 6 VDC, 22°C and after five second warm-up unless otherwise specified.
- Output of sensor with no pressure applied and a 150 KΩ resistor shorted across + IN to + OUT.
- Over a temperature range of 15°C to 40°C.
- Normalized offset/bridge voltage – 8 hours after 20 second warm-up.
- Previously qualified, not tested in production.
- Combined effect of sensitivity, repeatability, nonlinearity and hysteresis errors.
- Sterilization performed by customer.
- A voltage of 1,500 Vrms was applied across the dielectric gel while the gel was being monitored for dielectric breakdown. No transducers demonstrated dielectric breakdown, indicating that the transducers will continue to protect the patient from electric current up to the designated voltage.
- The transducer shall meet the requirements for all parameters in the specification when operated at atmospheric pressure: 425 to 850 torr (8.22 to 16.44 psi).

DIMENSIONS (millimeters)

Standard Bond Pad Metallization = Ag/Pt

Pin-out Table for solder pads

- 1 = +In
- 2 = +Out
- 3 = +Out
- 4 = -Out
- 5 = -Out
- 6 = -In

Note: Pads 2 & 3 must be shorted
Pads 4 & 5 must be shorted
